API reference

DeviceSessionState Enum

Represents the current state of a Meta Wearables device session.

A device session manages the connection between the application and a specific Meta Wearables device. The session can be in one of two states based on device availability and connection status.

Signature 🔗

```
enum DeviceSessionState : Enum<DeviceSessionState>
```

Enumeration Constants 🔗

Member	Description
STARTED	The device session is active and connected to a Meta Wearables device
STOPPED	The device session is inactive and not connected to any device
